

Science Enrichment

Children at Leopold are encouraged to Science in action in the working world through different types of enrichment.

As a school, we celebrate and take part in National and Global events

such as British Science week, National Space Day and World Science day. Children are set tasks and cross curricular activities to apply their scientific thinking. The aim is to develop a secure understanding of the importance of Science in our technologically advancing world.

Classes use the environments inside and outside of school to carry our practical investigations. In these sessions, children become scientists and are able to put their conjectures to the test through making observations and recording the results.
